

Hello!

We are looking forward to
welcoming **you**
Hall 10.1, Stand G051

flexxica presents a vibe & sustainable stand with lighting and acoustic solutions during the ORGATEC fair.

Oct 25, 2022

Feel welcome at flexxica's sustainable stand on ORGATEC 2022 in Cologne, October 25-29, 2022.

flexxica is proud to participate in ORGATEC 2022 fair for the first time with a wide range of lighting & acoustics products. Our idea was to create a spectacular and welcoming stand with specially arranged areas where professional light meets acoustics and outstanding design meets ascetics—and all of that with a pleasant vibe.

"We were inspired by working in the office, adding a modern character to it by separating acoustic zones, simple geometric lines, bright colors, and modern technologies as the background for presenting professional lighting fixtures. To show what lighting and acoustic comfort employees can achieve in the office, we took care of soft materials and lots of greenery, thus evoking a home atmosphere," said Karol Droszcz, flexxica art director.

flexxica's sustainable manufacturing for minimizing our carbon

Flexxica lighting and acoustics solutions are the answer to how we work today, and since the pandemic, it has changed dramatically. We work in open-plan spaces, conference rooms, and online while participating in video conferences, webinars, and online training sessions. We follow it and encourage designers to align every office lighting infrastructure with high-quality light sources. Flexxica lighting solutions customize them to your needs to maximize space utility, employee acoustic comfort, productivity, and safety, improve the flexibility of the office area, and lower the carbon footprint.

The journey towards sustainable transformation is one we must take together. Flexxica focuses on how sustainable practices can benefit your business and the environment, explicitly reducing carbon emissions. Minimizing our carbon footprint is one of the main goals of sustainable manufacturing in flexxica, and intelligent solutions like Tunable White can potentially help achieve some of our carbon targets. We also digitalize production to increase efficiency and improve sustainability in lighting manufacturing.

flexxica presents novelties and award-winning luminaires on the Light + Building stand:

- Bell Acoustic ecoPET (Design Plus powered by Light + Building), designed by Karol Droszcz
- Jungle (German Design Award 2022: Gold), designed by KaBo & PyDo
- Acoustic Cone (iF Design Award 2022)
- Acoustic Team (Red Dot 2021: best of the best), designed by KaBo & PyDo
- Boya (Red Dot 2021), designed by KaBo & PyDo
- Wire Medusa (Red Dot 2021), designed by KaBo & PyDo

flexxica brand goes beyond the horizon of standard office lighting. For us, light means the user's well-being; it defines the right working conditions and ensures the right level of focus. Light is not just an accessory to us; it complements the project. We see no room for compromise between effective, high-quality lighting and great design. We focus on the quality and aesthetics of our luminaires. We create solutions that enrich our clients' projects.
